Entered as second-class matter January 2, 1913, at the post office at Weiser, Idaho, under the Act of March 3, 1879.

FRENCH ON THE JOB.

Congressman French has again proven his devotion to the interests of the people of Idaho, and the appeal went by the introduction of a bill to continue operating for the extension of payments for water rights from ten to thirty years. The bill reads as follows:

Be it enacted by the senate and and house of representatives of the United States of America in congress assembled, That an act entitled "An act appropriating the receipts from the sale and disposition of public lands in certain states and territories to the construction of irrigation works for the reclamation of arid lands," approved June seventeenth nineteen hundred and two, be amended so as to extend the number of annual payments due under said act to the amount of water-right charges from ten to thirty years; provided, that the courts of foreclosure, or receiver to be appointed, where no annual payment has already been made, and where any annual payment or payments have been made, and only a number of annual payments for the amount unpaid to those dues, the number of annual payments due, upon the principal of the said.

Senator Borah has again risen to the occasion and demonstrated that he possesses the courage of his convictions. The strong test by Borah Mulkey of the statement that the senator was to take the stump for Taft looks very much like an effort to injure him. Idaho is progressive, and while most of the progressive Republicans will remain within the party there is no denying that some of them will not vote for Mr. Taft, and Senator Borah would unquestionably believe his chances of securing a satisfying floss and the "Bull Moose" vote of whom are going to support him. While it is regrettable that he cannot make a fight for the head of the party, every person who has his future at heart will endorse the course he is taking. He has his own interests to look after and it is not the part of wisdom to mix in the political tangle we are in artificially.

Idaho has received a commendable honor in the magazine section of Former Governor Brady in the presidency of the International Congress of Mines, Metallurgy and Applied Chemistry. The congress is the most proud in choosing Idaho's greatest booster. The great west owes him a debt of gratitude for his untiring efforts for its development and the people of this state are pleased that his valuable services have been so fittingly recognized. Governor Brady is continuing his work in Europe, where he is now in attendance upon the congress, and the congress could not have selected a more capable man to represent the country. The Democrat congratulates Governor Brady upon the honor conferred upon him.

The Democrat-Herald very pertinently comments that Address T. Smith already set to himself for the shortcomings of Senator Hepburn.

Restoring the Home Lighting.

What the home is confused with novel lights is not all apparent, the many forms the wiring has done before there was a good filament lamp were open showing of end, crude and apparently, many very radical changes are necessary if the consumer is to get the full benefit of the new lamps. So nearly every home the lighting could be improved with very little trouble and forethought.

In the first place, nearly everyone has a fixture in the dining room, the living room and the kitchen. These lamps cost, hours, it is true, but they still give three times the light of the old carbon lamps for the same electrical current.

In purchasing new lamps for the home, there are three things to be demand. You must know the "voltage" of the electric circuit, the "wattage" of the lamps and the kind lamps you want.

The voltage will last but a little while on high voltage lines and lamps of 110 volt rating when used on a 220 or 250 volt circuit will last but a few hours. Because the pressure is too low, the lamps will not burn at the electric light company's office will supply this information and all lamps purchased should be of that voltage rating.

Lamps are also rated in wattage, the wattage of a lamp governing the amount it will consume when connected on a circuit of the proper voltage. The candle power of ammeter lamp is about four-fifths of its wattage. Thus, by counting, a 40-watt, 110 volt lamp for determining the proper position of lamps for reading, one should allow about 40 candle power for the best results. Incandescent lamps are used; the silkworm will be found to begin two to three times as great if carbon lamps are used. Interior with dark wall paper, carpets and furniture will require a higher allowance than those with a light coloring scheme.

As an example, suppose it desired to illuminate a room measuring 20 feet by 30 feet, with walls of dark green and having dark colored furnishings. For such room by usual rating 700 lumens (candle-hours) per 100 square of electrical energy. If we use metal filament or Mazda lamps we accordingly would need for this room either one 125 watt lamp or preferably four 25 watt lamps. It is understood, of course, that these lamps should be equipped with shades, diffusers or reflectors. Several small lamps are to be preferred to a single large one, because they can be placed in different portions of the room and thus give more uniform illumination throughout the room. It upon inquiry, it is found that the voltage of the circuit is 110 volts, the lamps would be ordered for 110 volts. If the voltage of the circuit is 220 volts, the lamps would be ordered for 220 volts. Many 110 volt 25 watt metal filament lamps.

The Duchess and the Duke.

It was indeed strange. The Duchess was a little lady, about three inches taller than the Duke, with pretty auburn curls and cheeks the same. Their every action bettered all over her and she moved, and she was so delicate that, when you held the little golden thimble that was her slipper, you could almost see through it, and turned the flexible baby of her foot. —Stephen Crane's "The Monster."

Why Didn't He?

Queen Victoria, during a reception at Balmoral at a dinner in Chicago a few years ago, said:

"I like to take up on a patriotic ex pense phase of timeline.

"All once decided to visit. He knew it was a desire to serve his country. So he called on a prominent man who was also prominent and powerful, and he told his friend about his patriotic desire and asked for a letter of introduction.

"That's very well," the prominent man said, "but why don't you go to Washington and see the president himself?"

"Why, sir," the astonished visitor replied, "I'm not big enough for that."

"Nonsense!" the other said. "Why don't you go?"

"Why didn't I go?" was the reply. "I thought he was that too busy man himself. So I went home and turned the flexible message back down."—Stephen Crane's "The Monster."

A Real Patriot.

Outcast Is At Article of Human Food.

The highly nutritious properties of eels are generally recognized by readers of all kinds of young stock and work animals, says Prof. J. B. Jones, state chemist. There is no question but that the recent amount of "mushy" vegetables used this season by the average family in search of "health" or economy, or particularly of this so if in the family there are growing children, and adults whose employment is such that they require much fat and other nutrients. Pickle bottles are usually filled with cucumbers, but the preparation of eels for food is much superior to the bottle as a receptacle for the materials of the pickled eel are therefore decidedly better than the cucumber and the bottle is much more attractive if metal filament lamps are used; the silkworm will be found to begin two to three times as great if carbon lamps are used. Interior with dark wall paper, carpets and furniture will require a higher allowance than those with a light coloring scheme.

Why Ha Wei Succeeds.

When Leader Wetzler was appointed collector he visited Garland, and while in London the London minister told him he still must Lord Pauncefote. They found the gentleman hampered in his business and he suggested if Ambassador American was exerted might benefit him. Wetzler was minister was named, and rather than see his friend go into a decline, he drew Lord Pauncefote aside, told the situation and requested his assistance. Why didn't you say so?" was the reply. "I thought he was that too busy man himself. So I went home and turned the flexible message back down."—Stephen Crane's "The Monster."

The Sacred Codfish.

The sacred codfish carved in wood is to be seen on the north wall of the hall of representatives in the statehouse at Boston. It was given a place of honor because two chosen judges immediately opposite to each other in the halls of the lawmakers of Massachusetts for over 200 years. It is a relic of the ancient history of the commonwealth, having been originally hung in the old colony house that it has had a place
